

## SSDP :: PHP LAB 04

**OBJECTIVE** Demonstrate Cookie Handling With PHP

---

**REQUIREMENTS** A sample of this lab is available at: [http://bcitcomp.ca/ssd/php\\_lab04\\_sample/](http://bcitcomp.ca/ssd/php_lab04_sample/)

Add “Remember Me” checkbox functionality to the form used in PHP Lab #3. You can use your own lab 3 code as the starting point, or if you prefer you can use the lab 3 sample code available from D2L session 3.

If the user submits the form with “Remember Me” checked, save to a cookie(s) the username, student number and gender of the user. The cookie should expire in one week. If the user submits the form with “Remember Me” unchecked, delete any cookie(s) you may have set earlier.

When the user requests the form, if there is a cookie with data available, pre-populate the username, student number and gender fields using the cookie data. Also be sure to pre-check the “Remember Me” checkbox. If there is no cookie available, do not pre-populate the form fields, and ensure the “Remember Me” checkbox is unchecked.

---

**SUBMIT** Upload all file(s) to D2L drop box before the end of day (11:59pm).
